## Perceptual bias

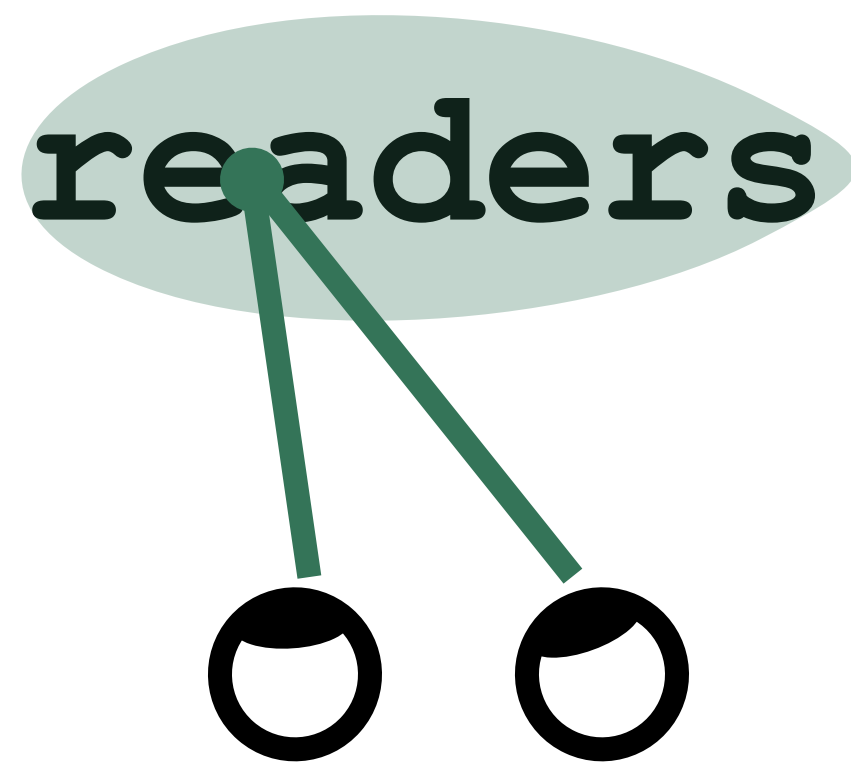

Visual span is asymmetric (right-visual-field advantage), so fixating left-of-center maximizes how much of the word is in view

## Informational bias

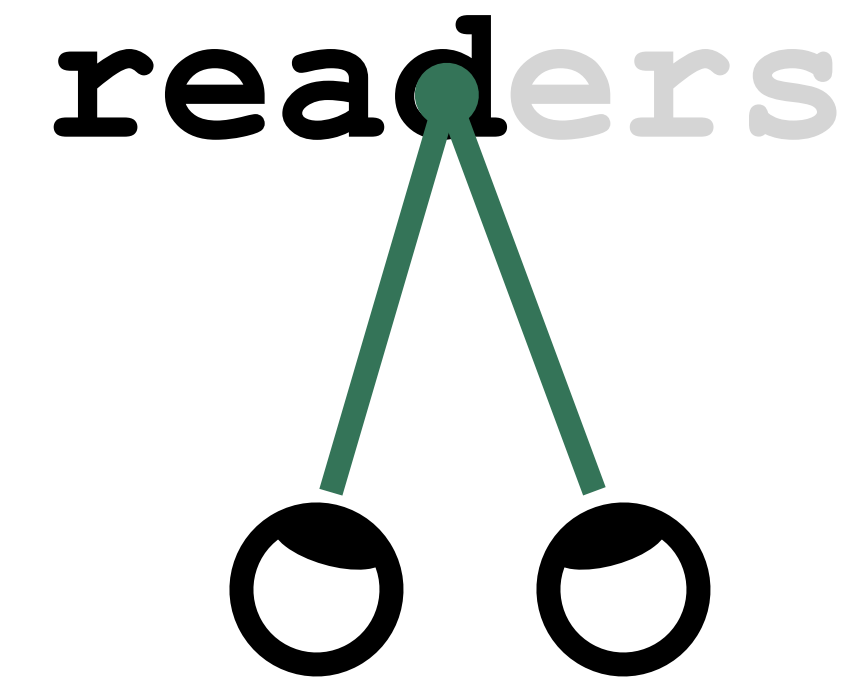

Words are typically more informative at the beginning, so fixating left-of-center places greater constraint on the possible words

Left-visual-field advantage

$$\gamma = -0.5$$

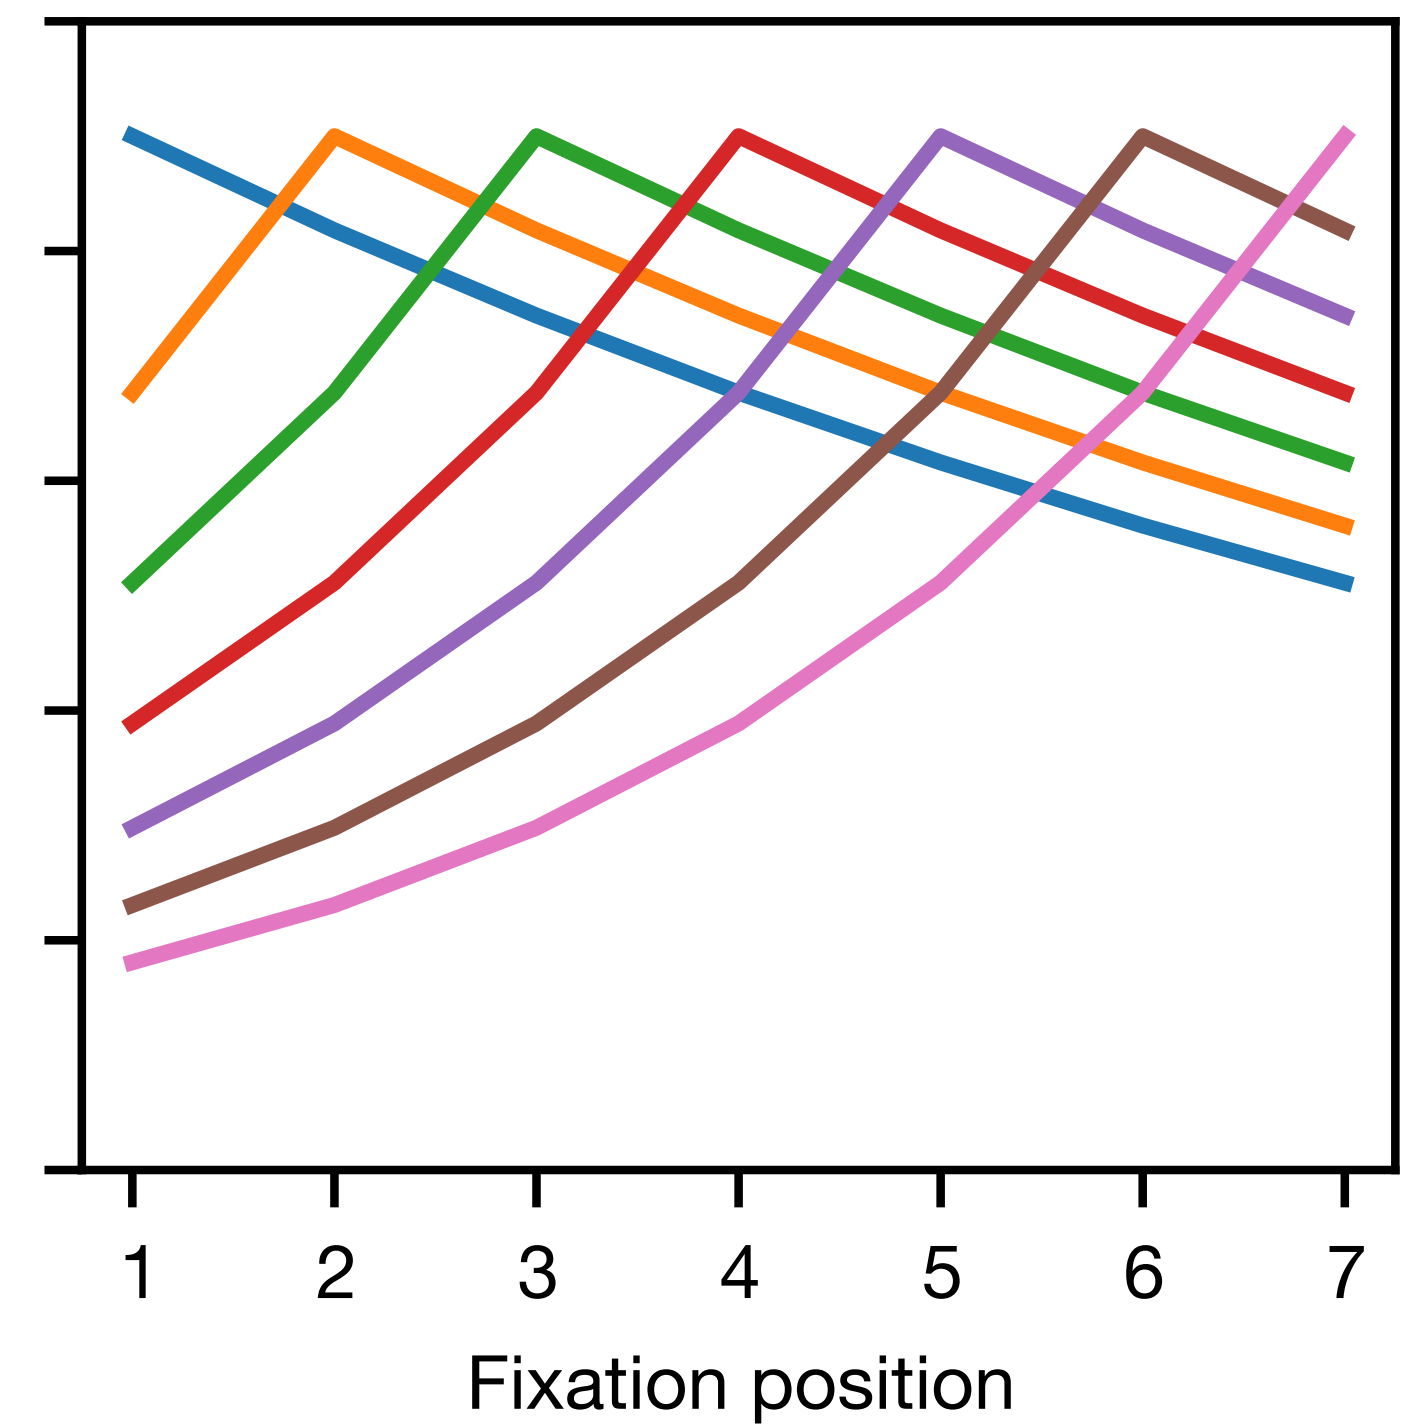

Symmetric visual span

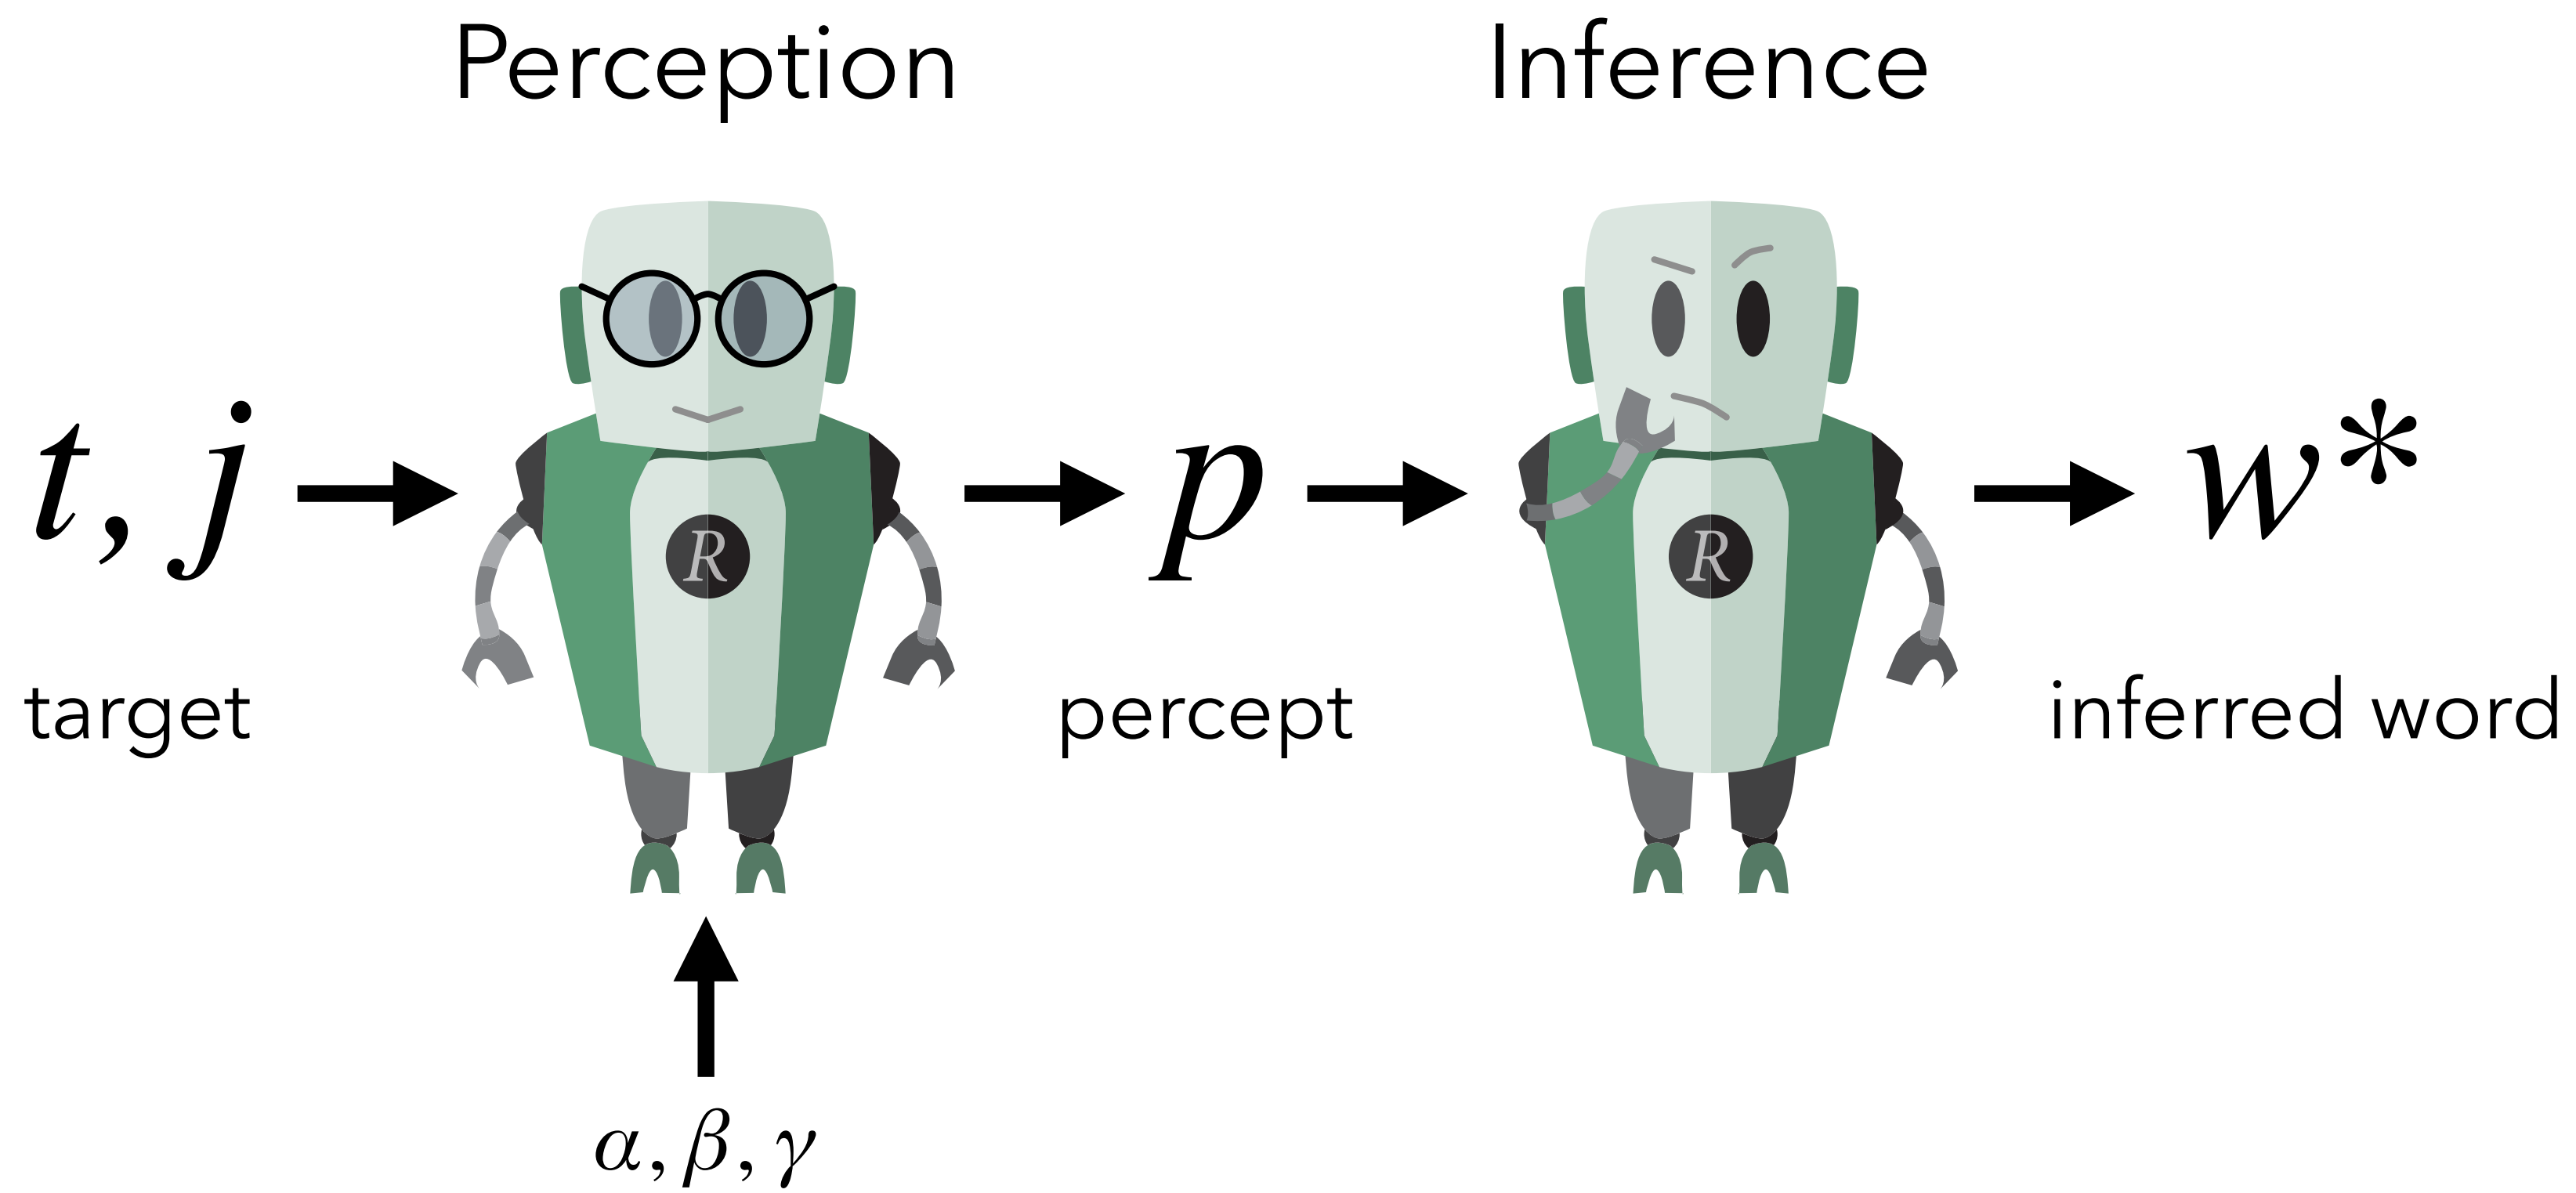

$$\gamma = 0$$

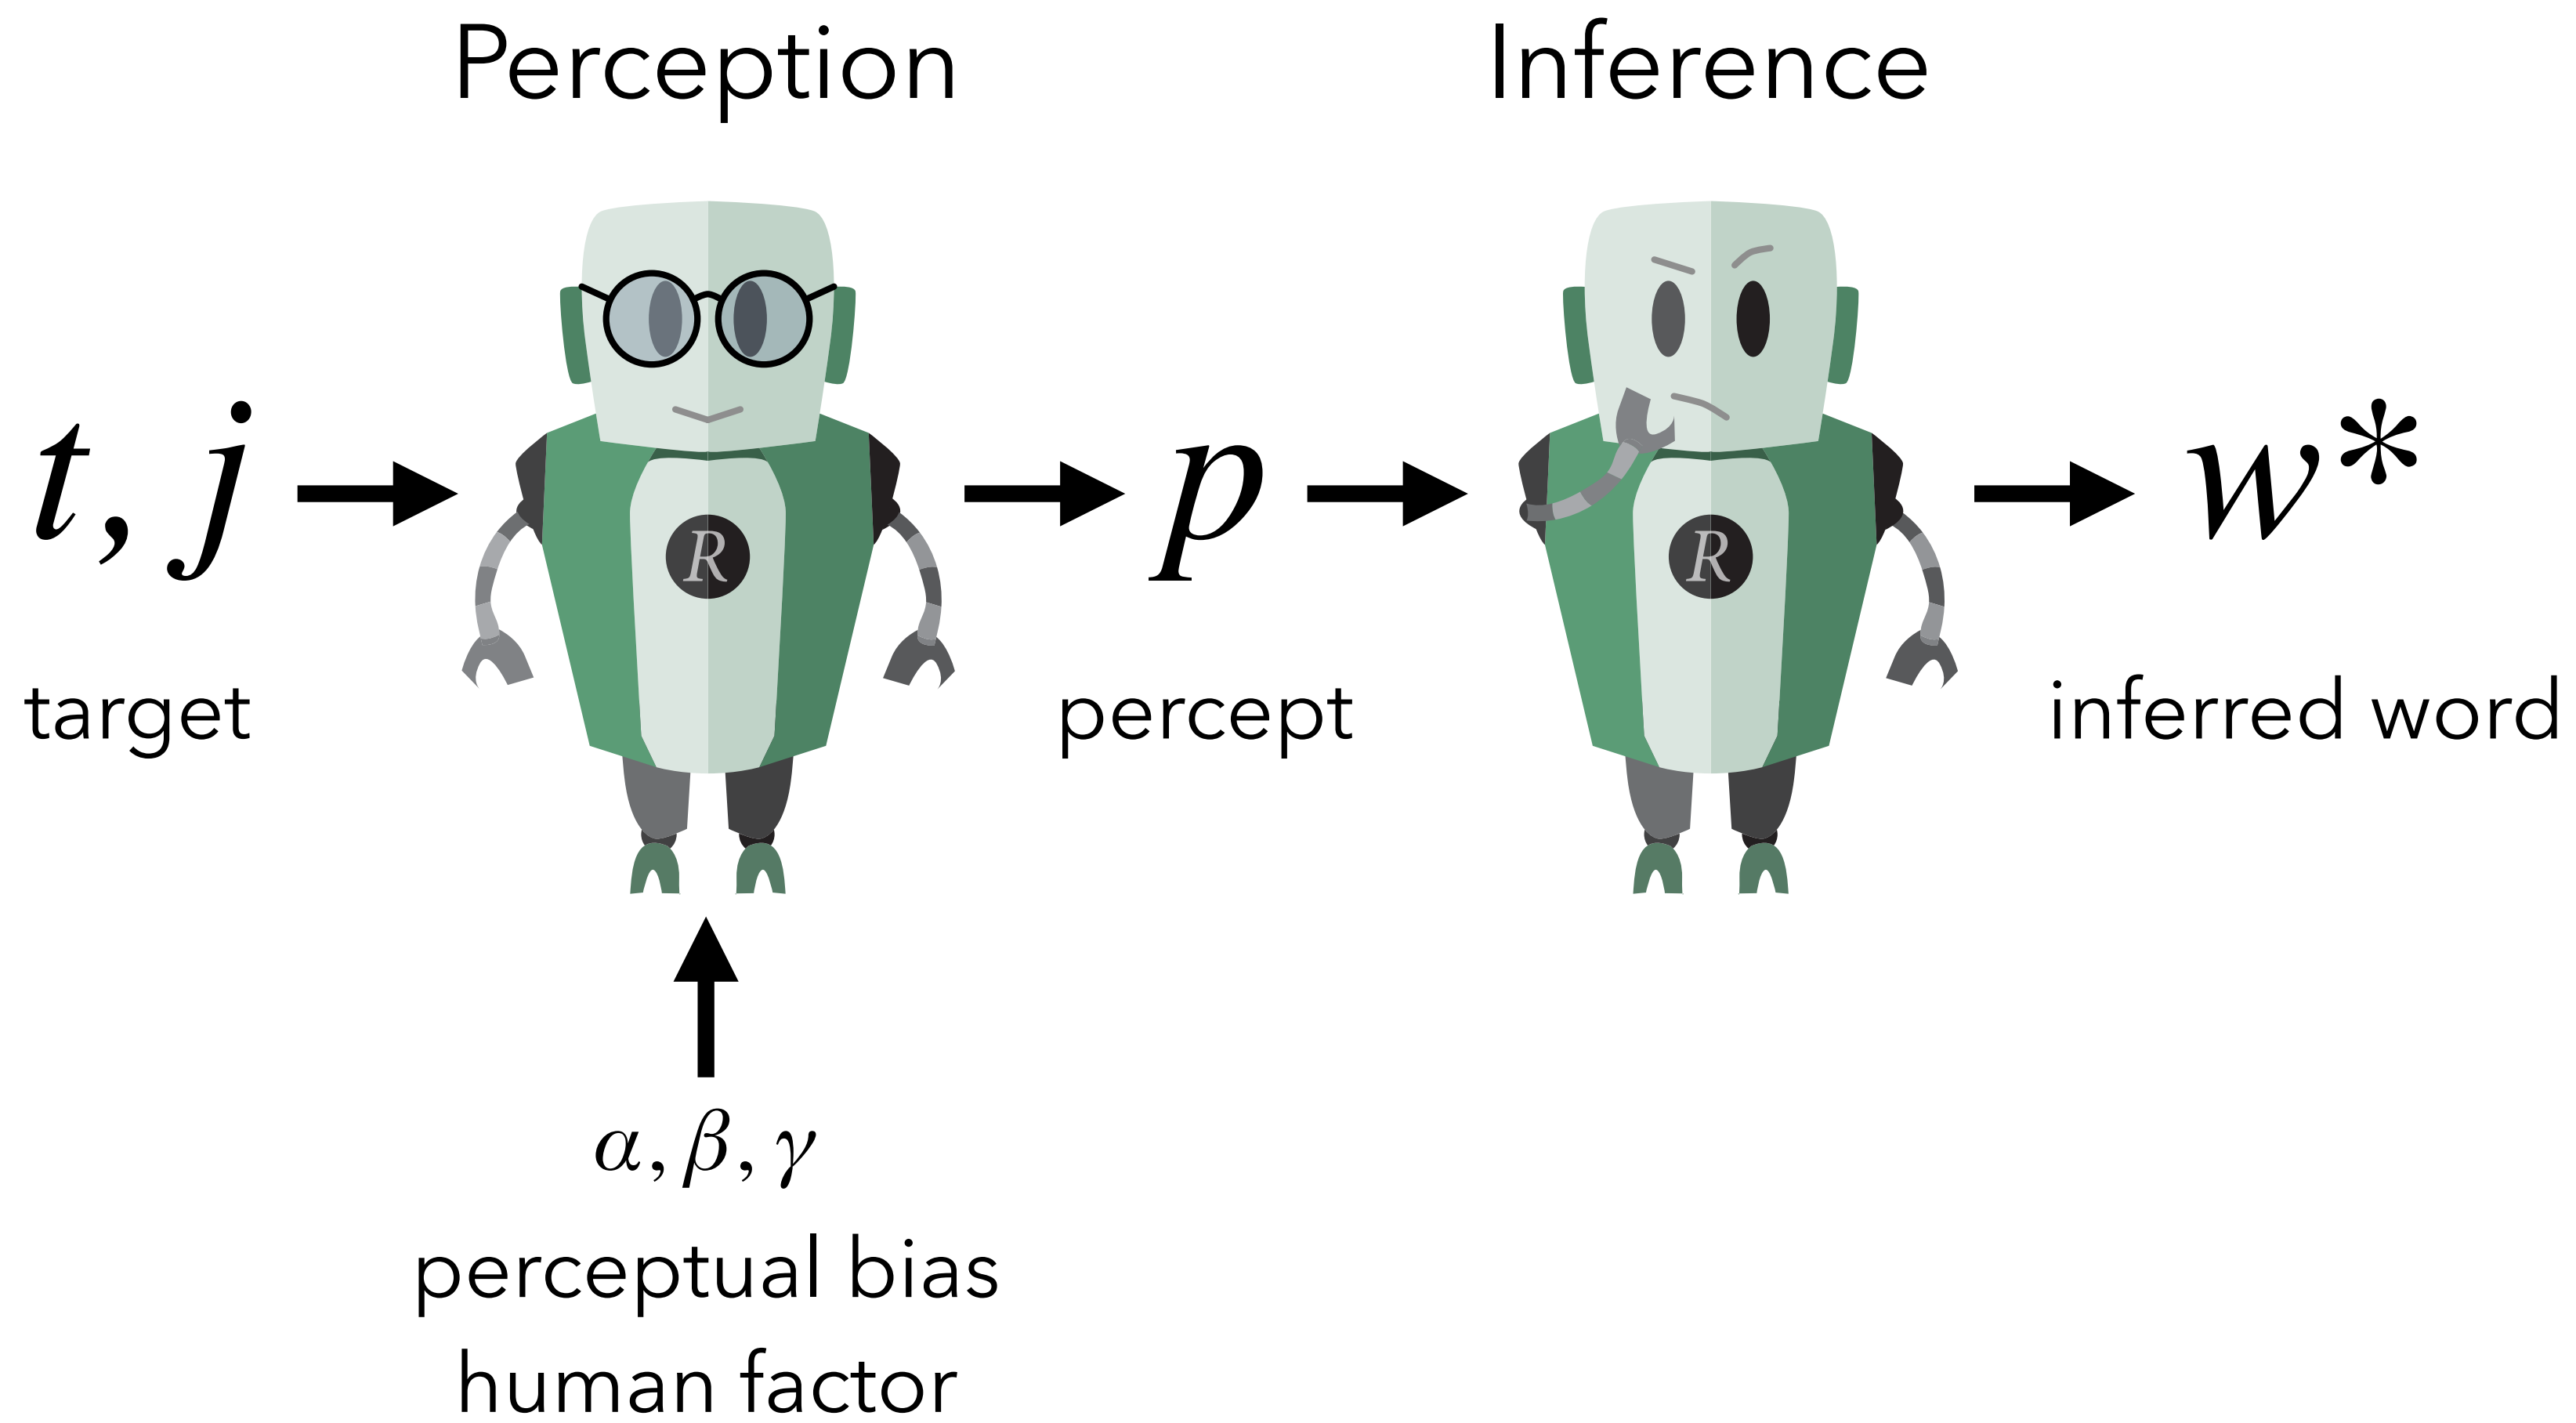

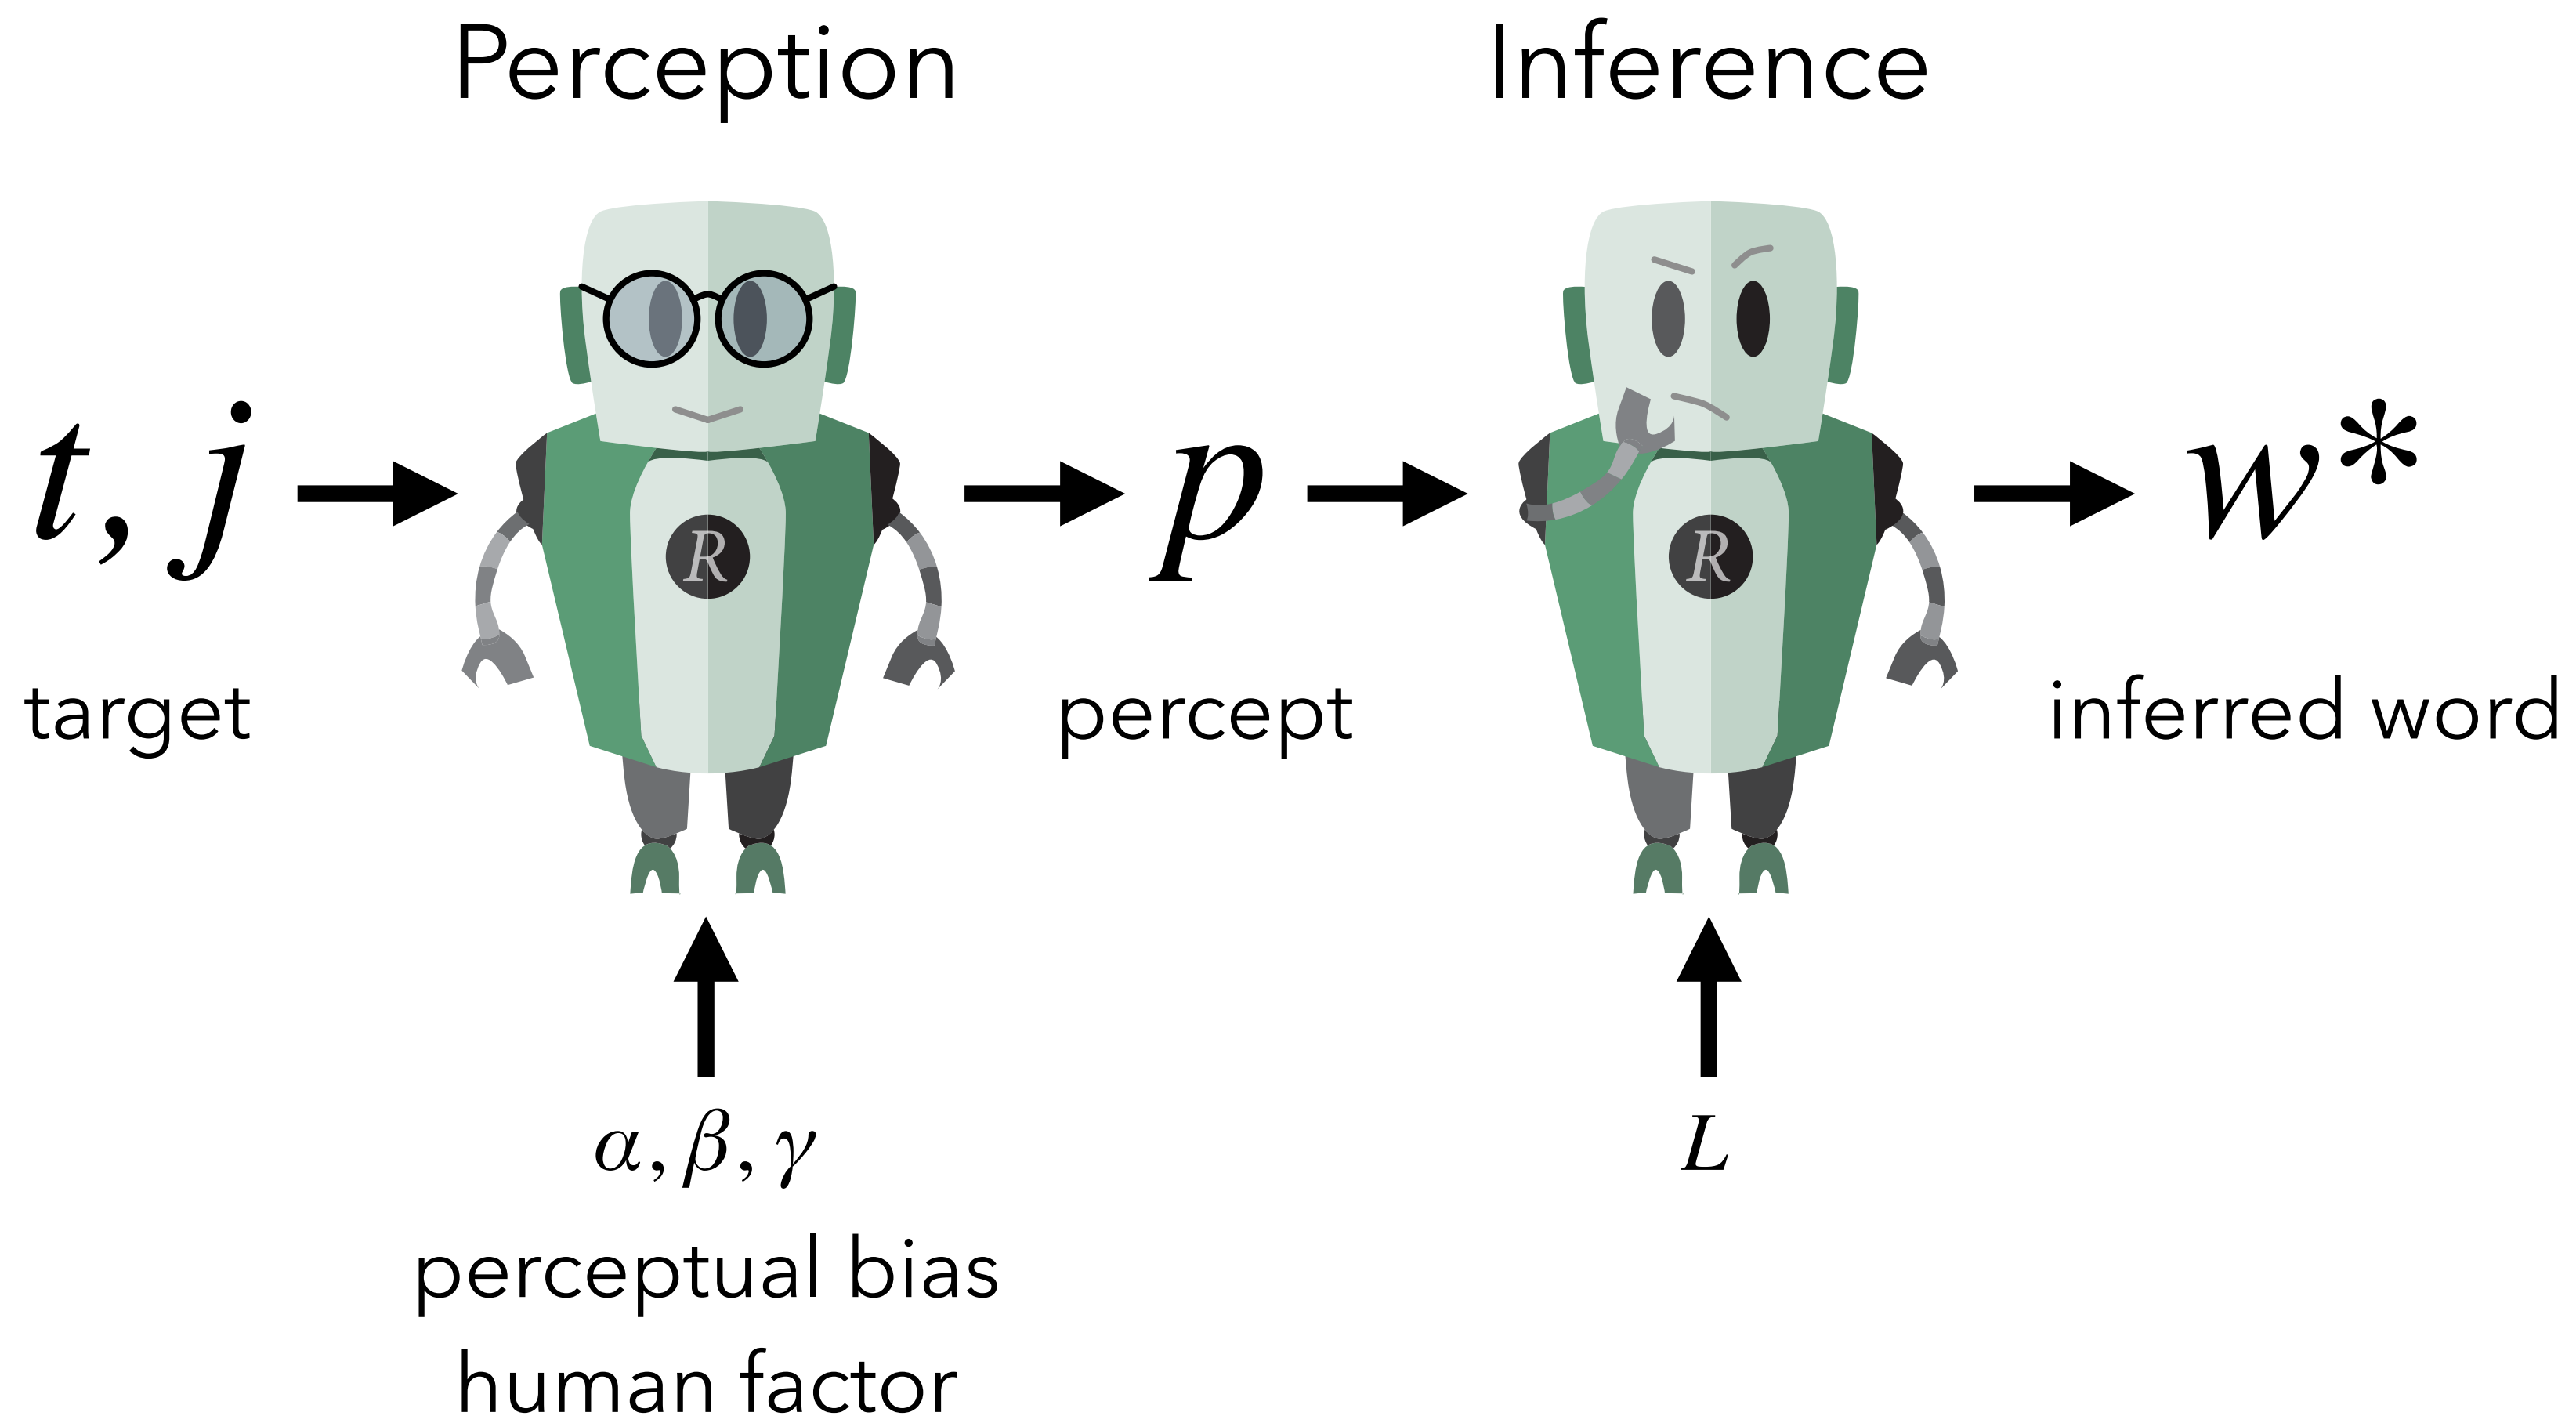

Right-visual-field advantage

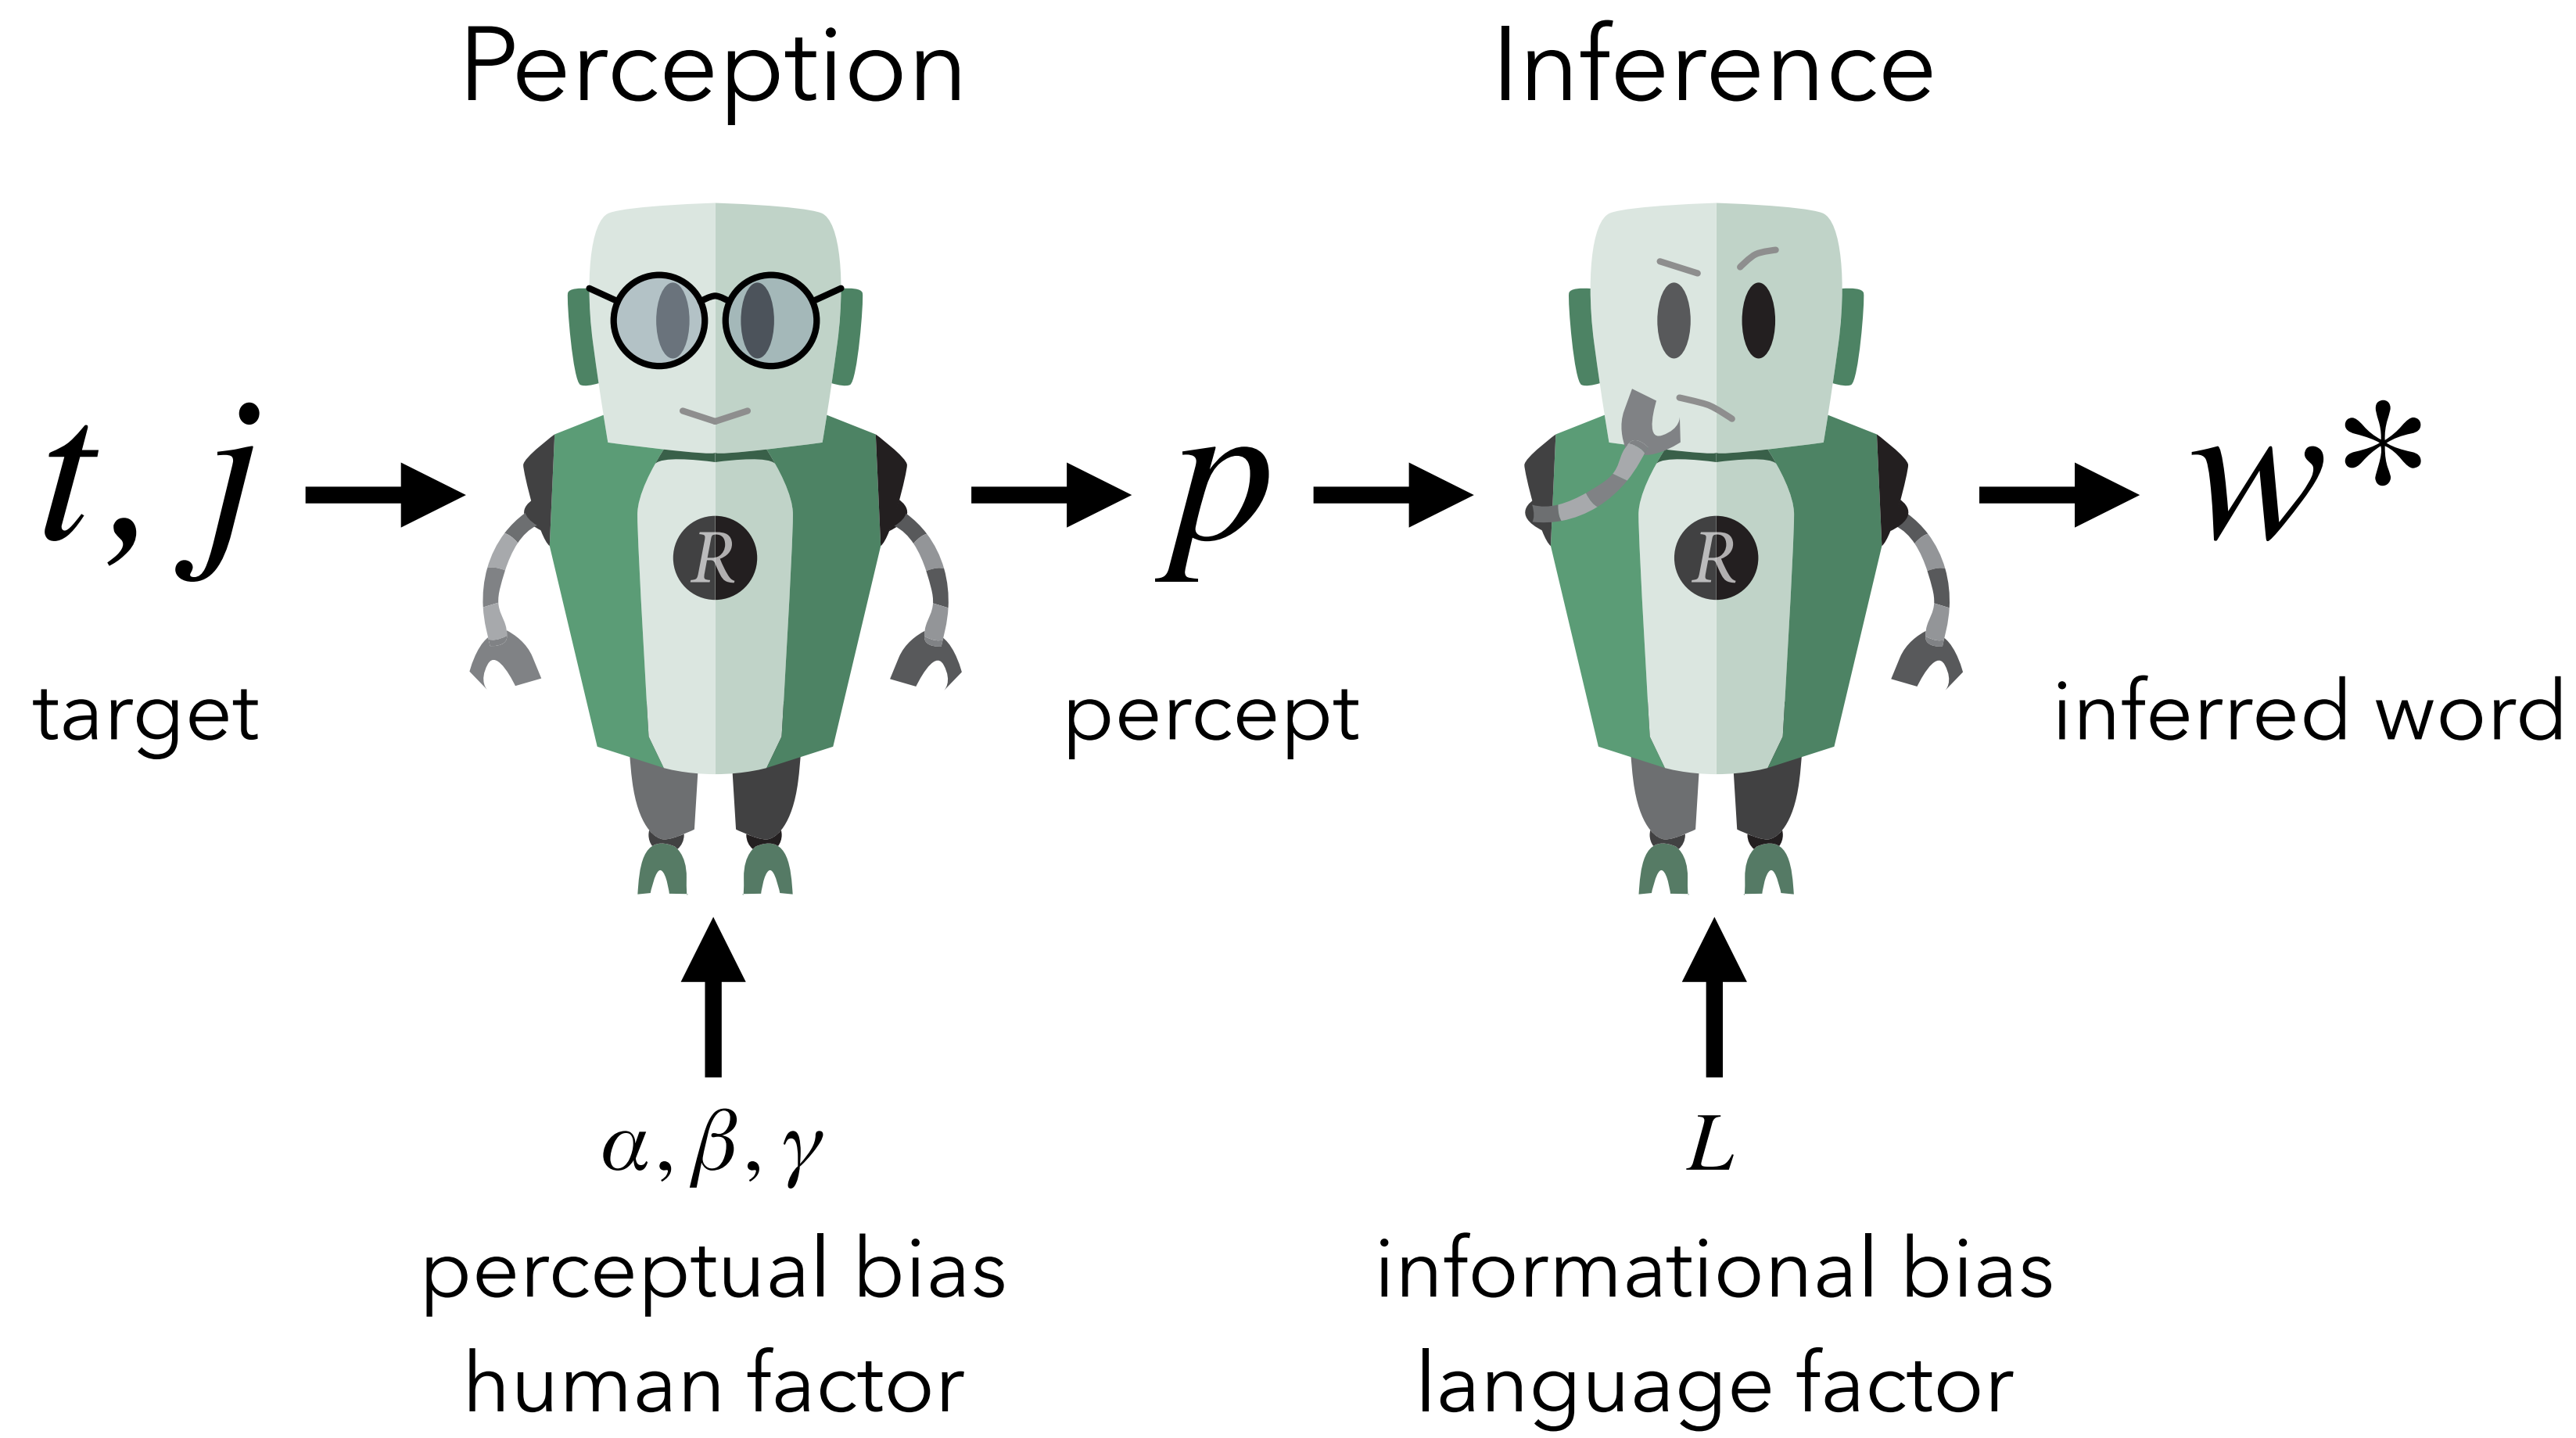

$$\gamma = 0.5$$

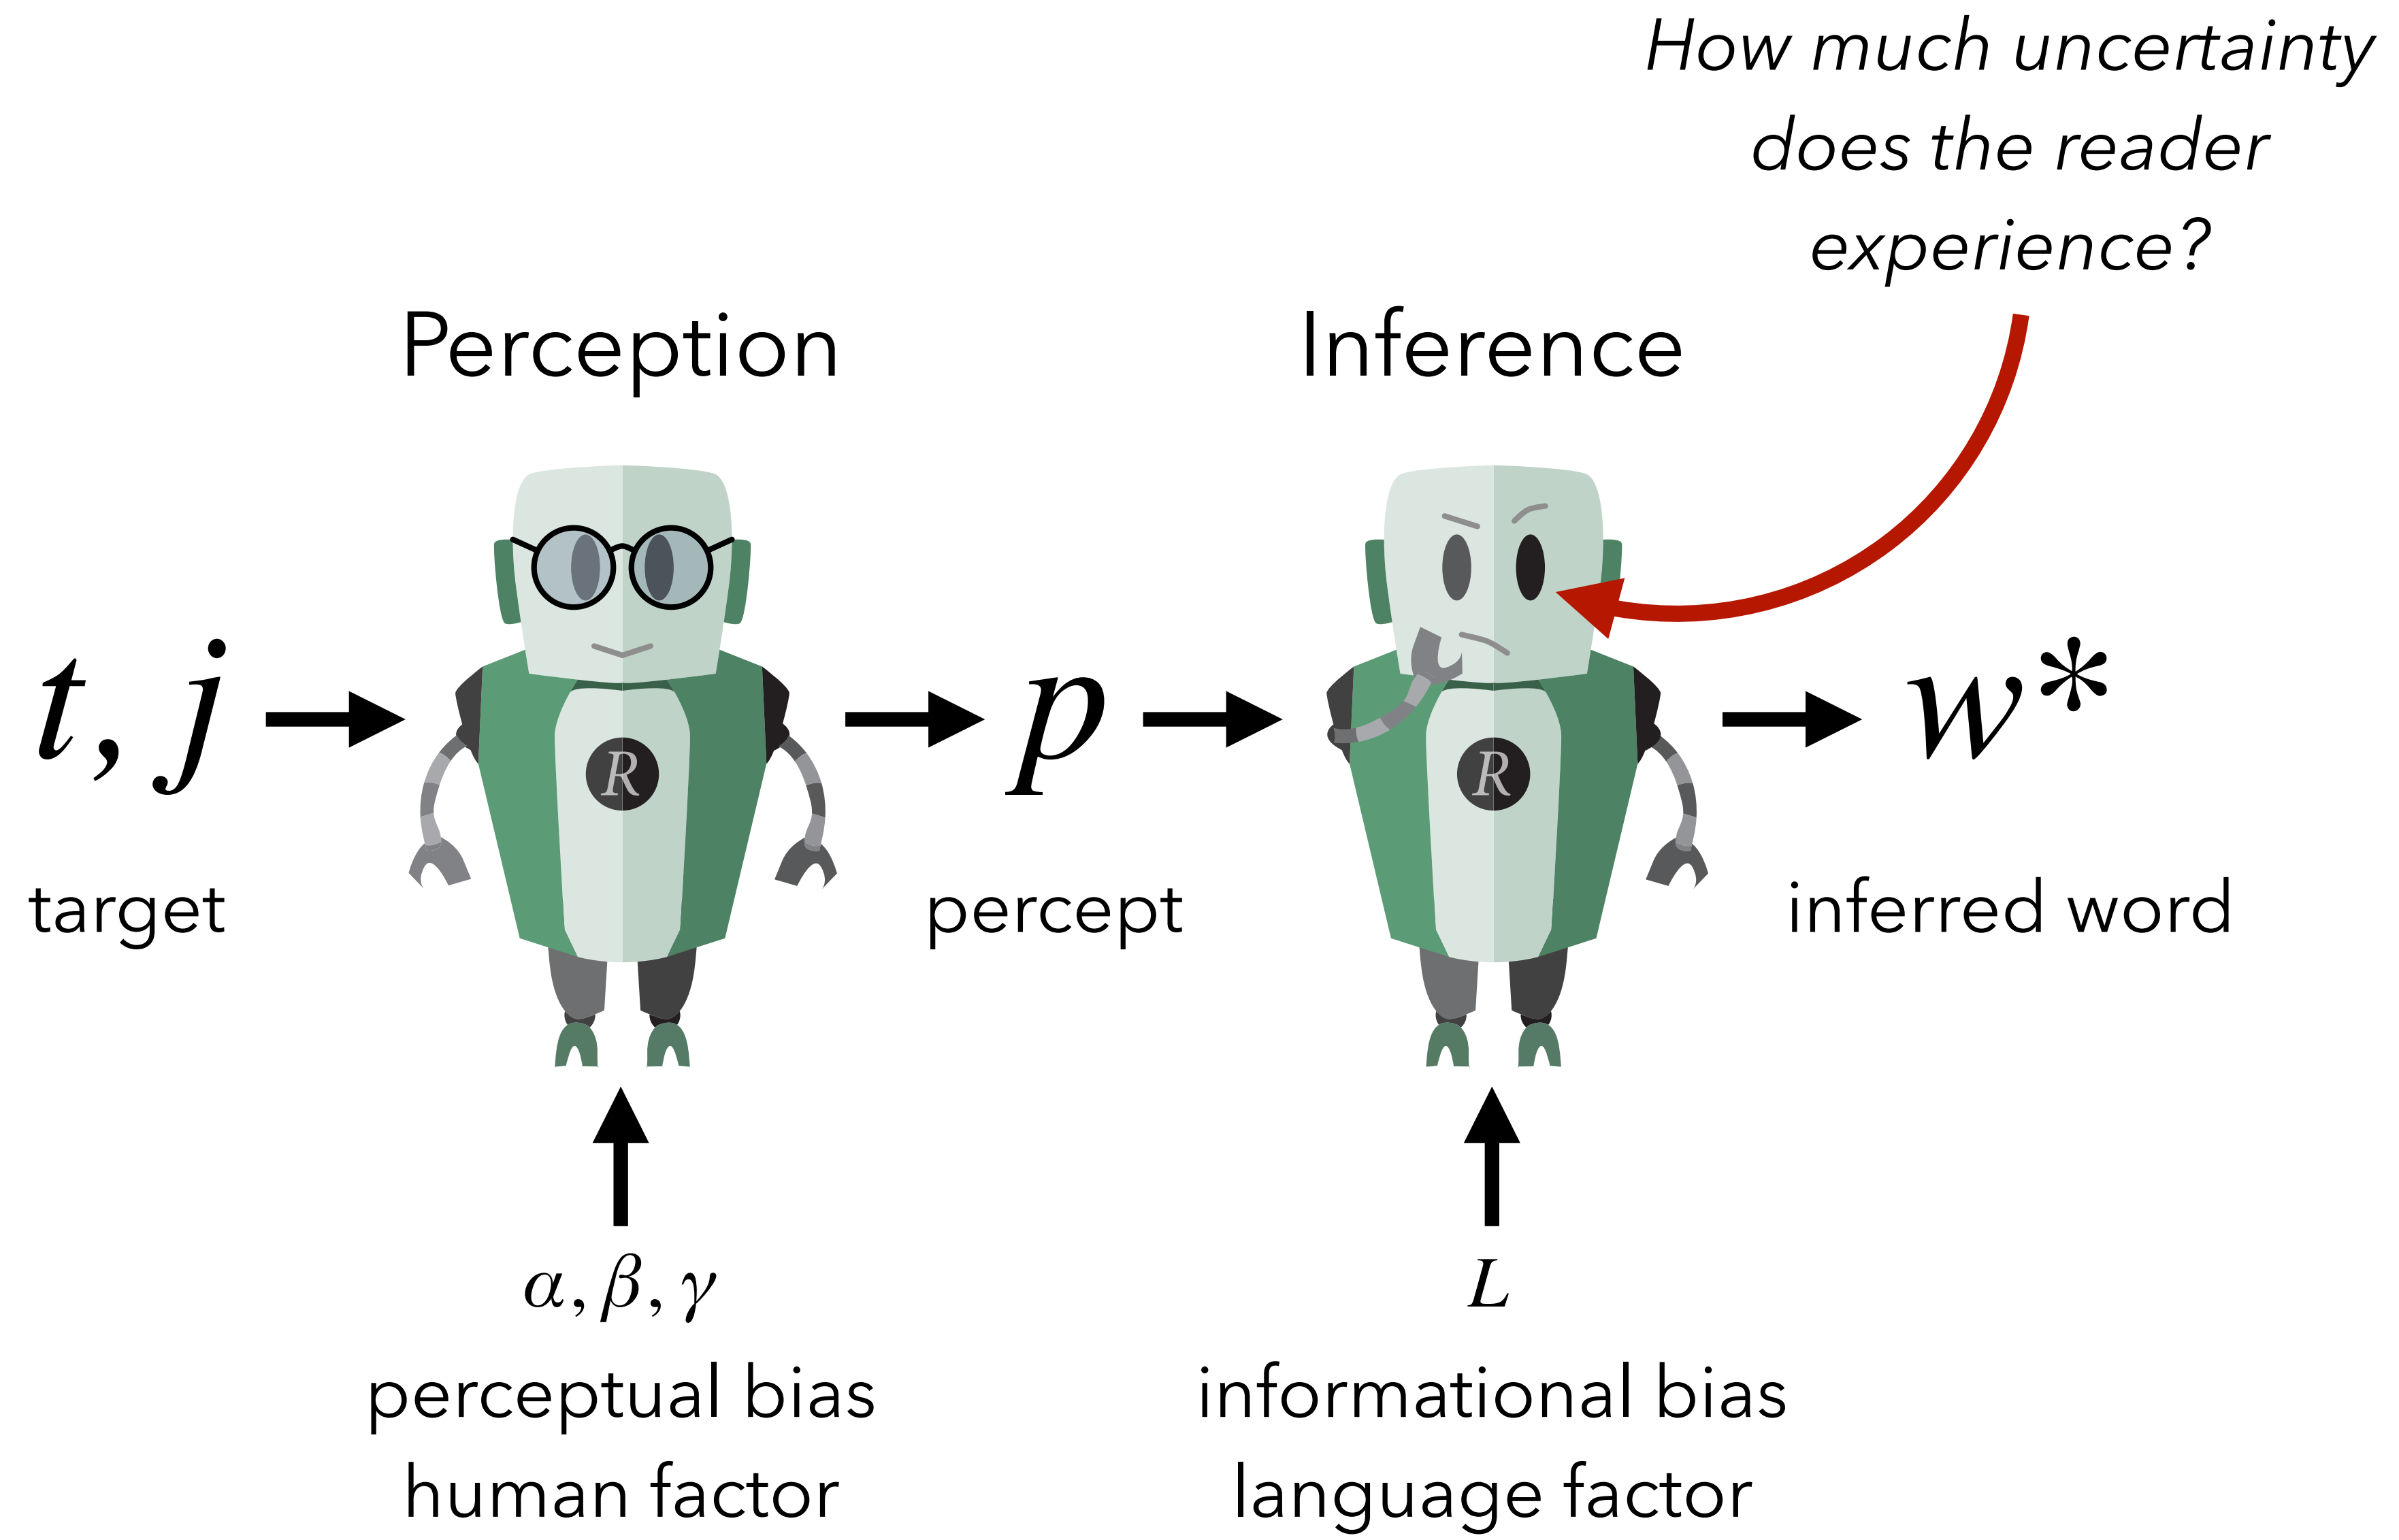

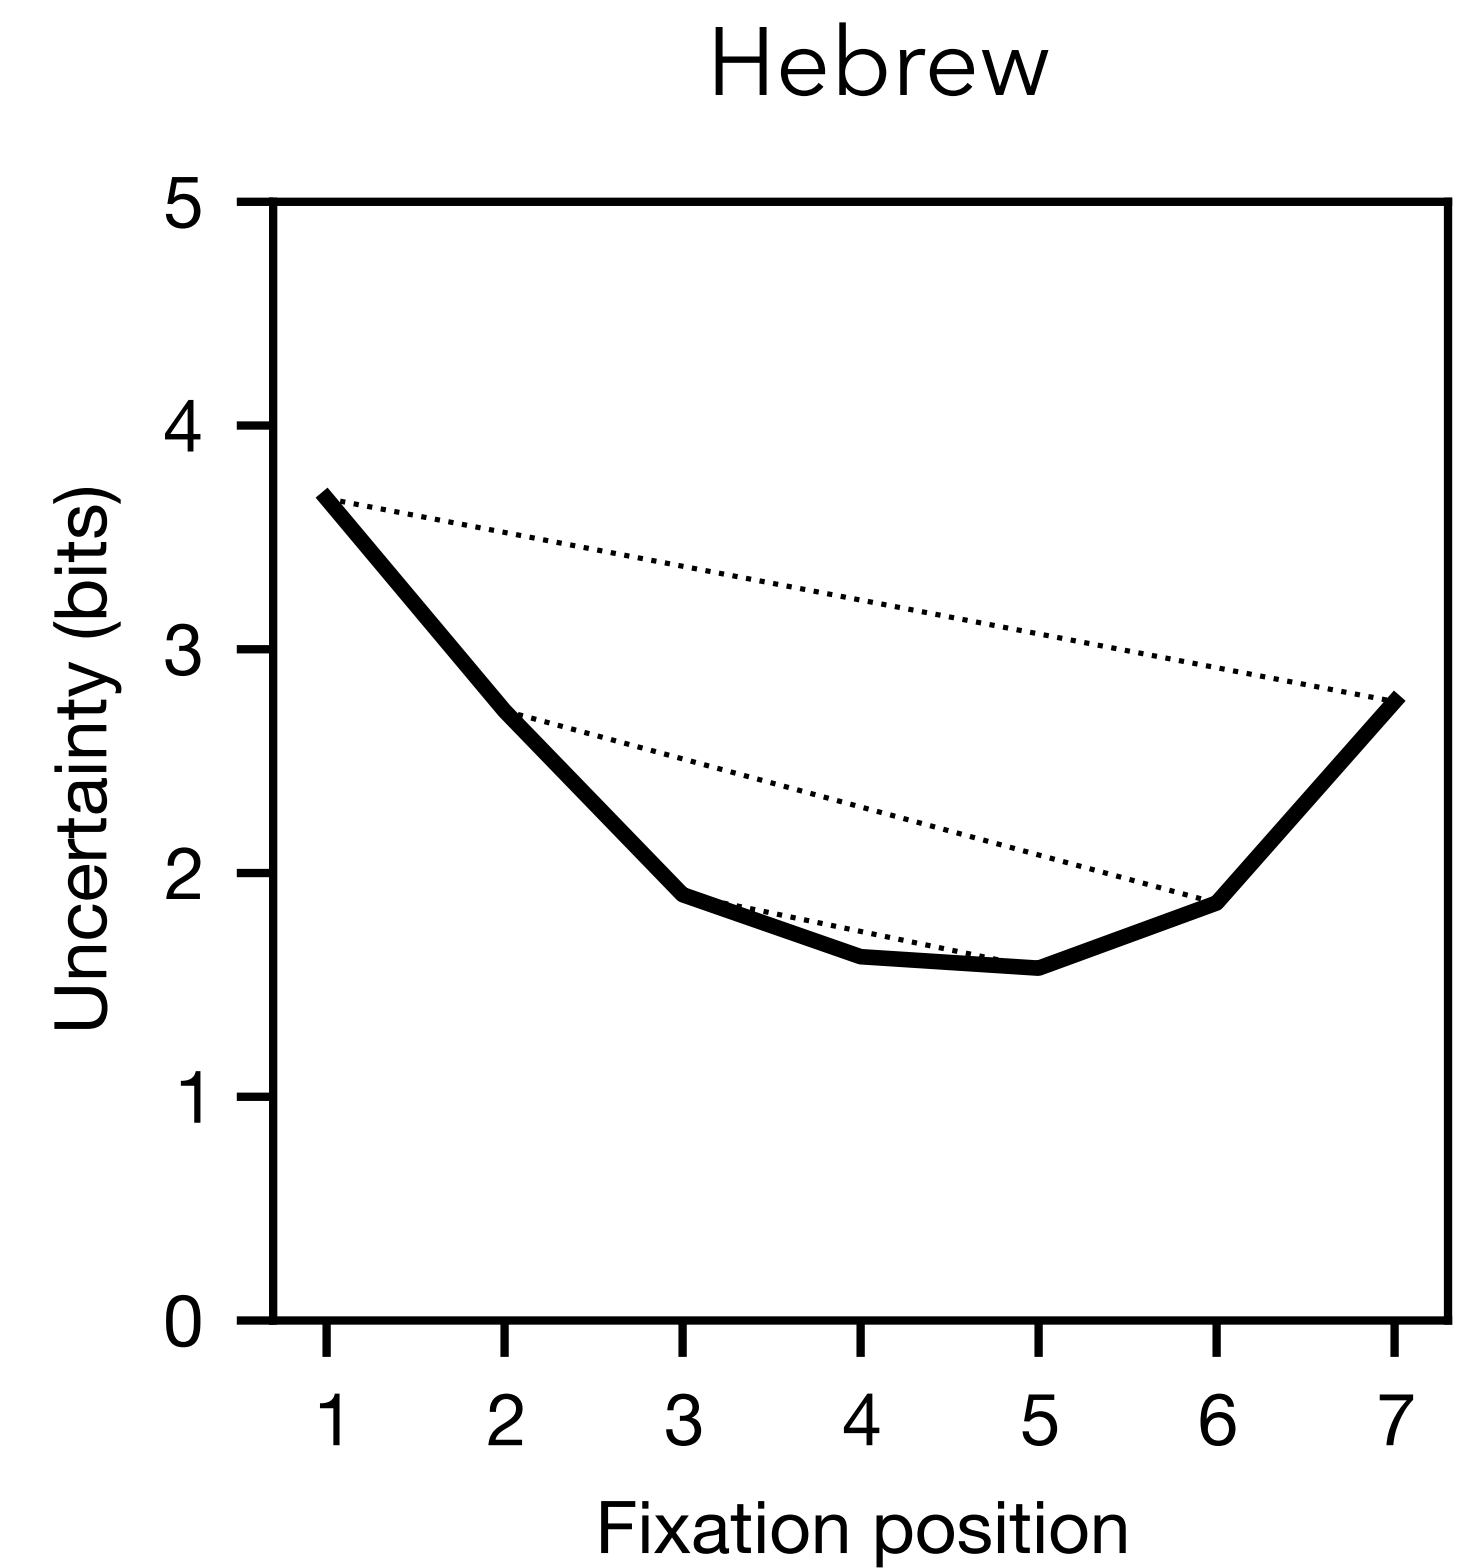

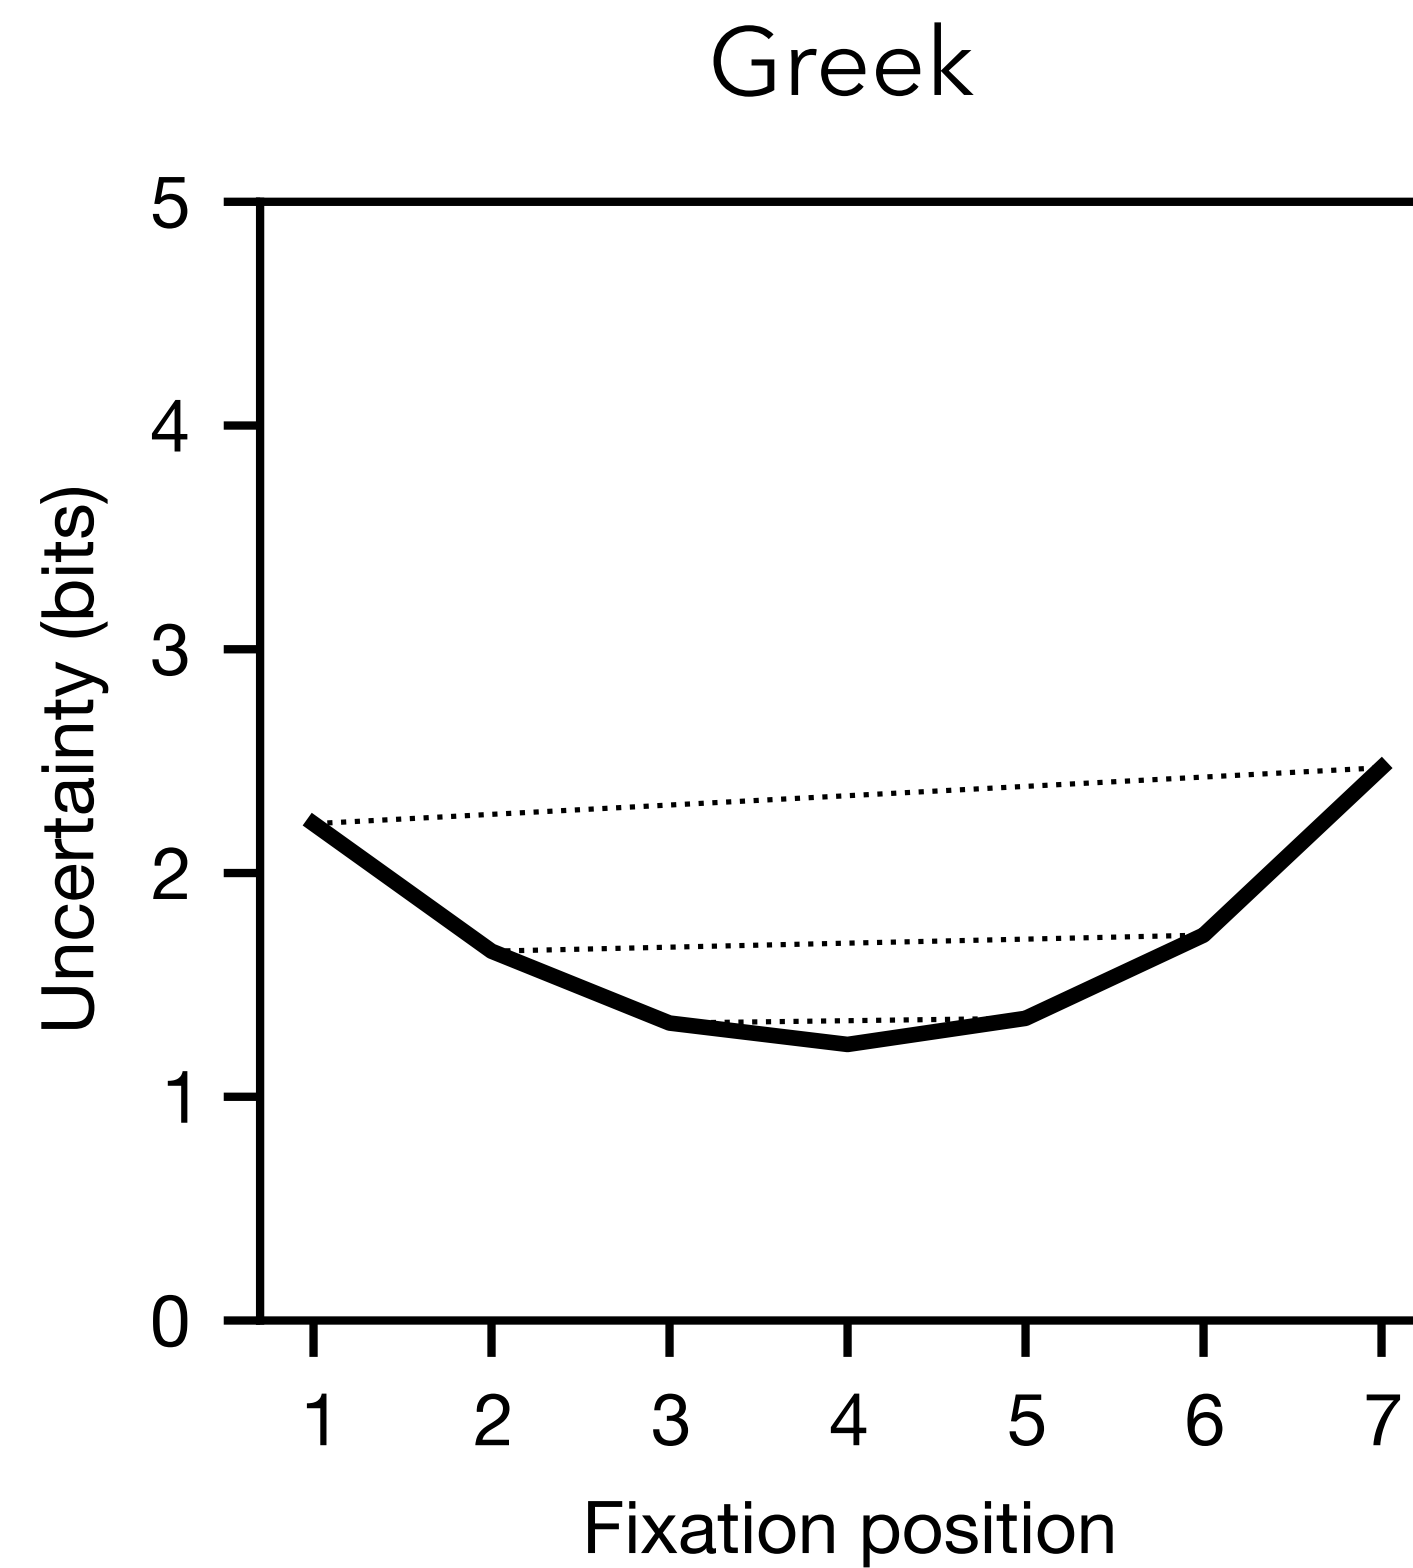

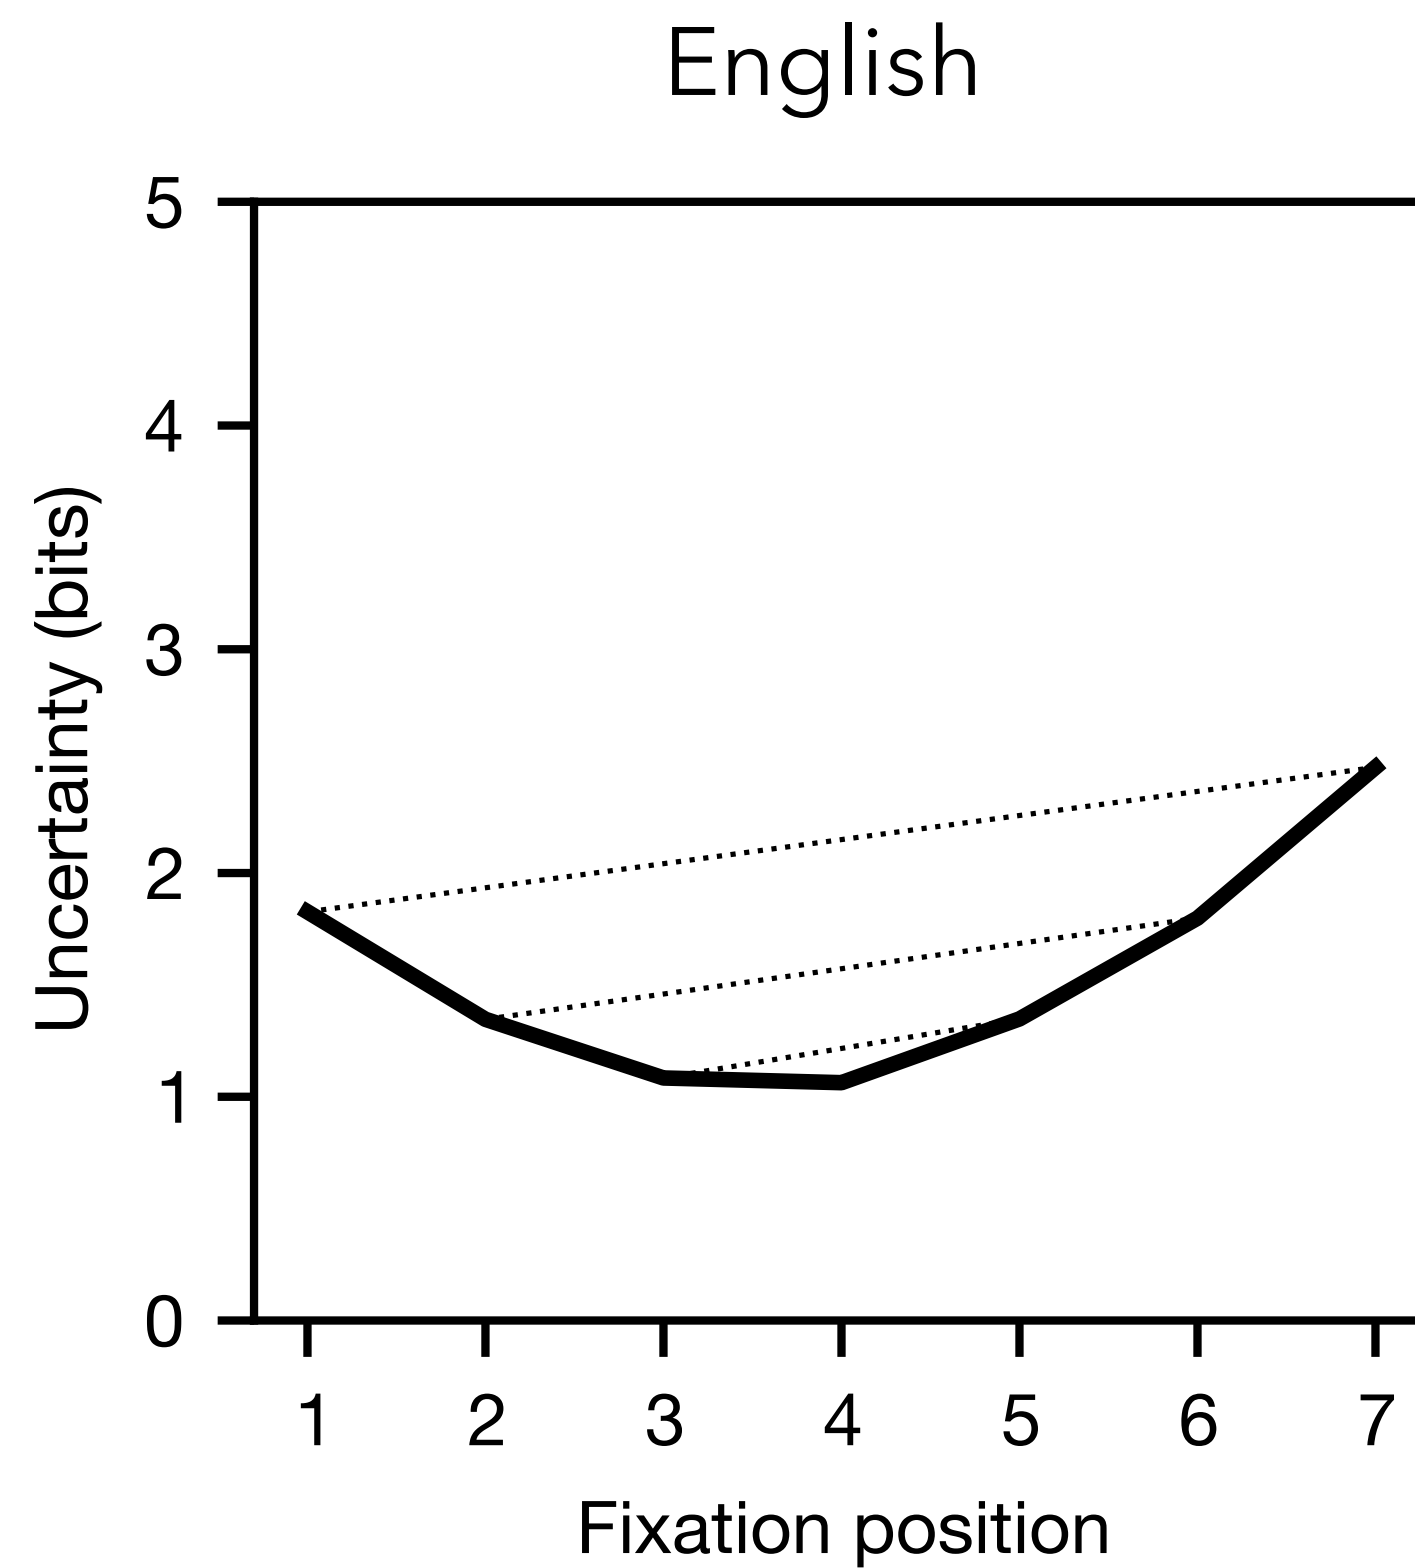

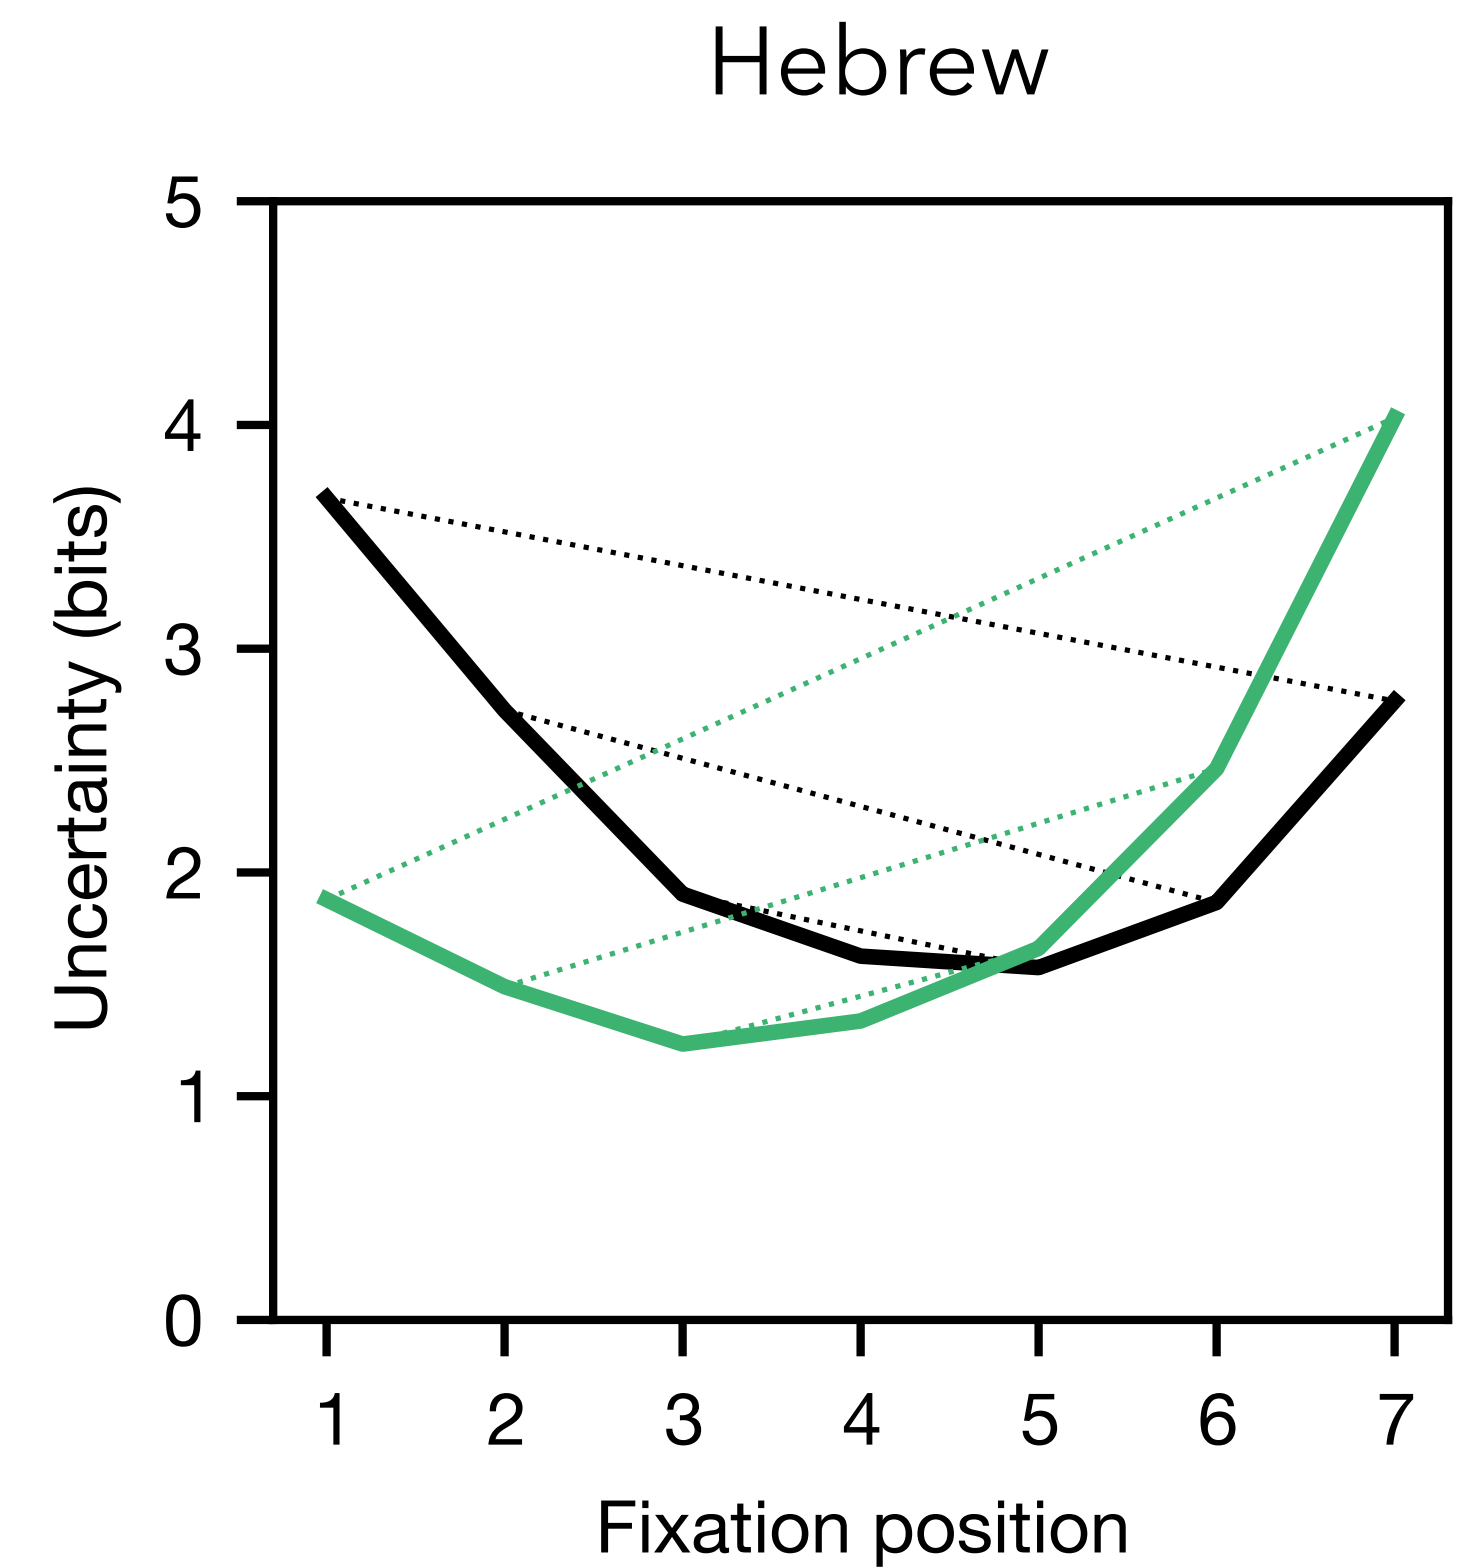

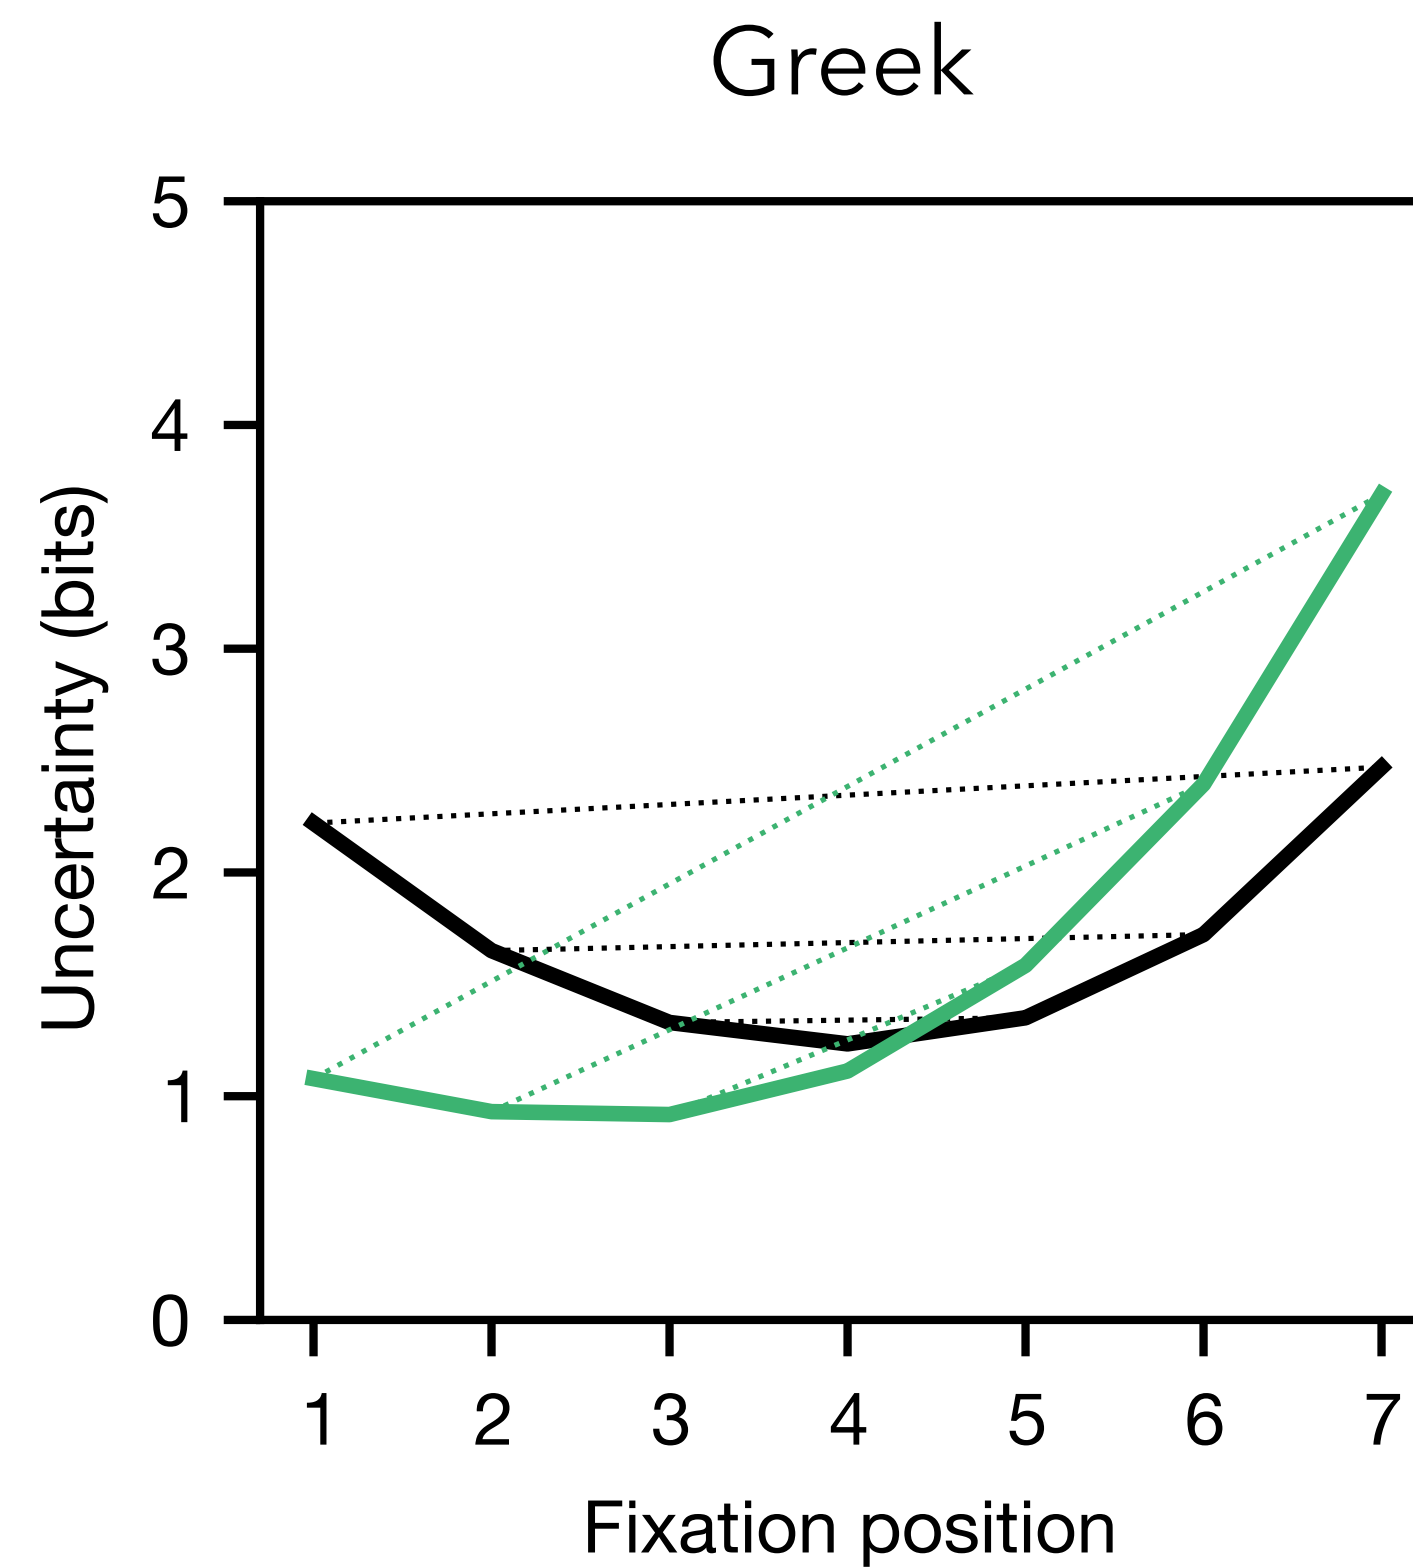

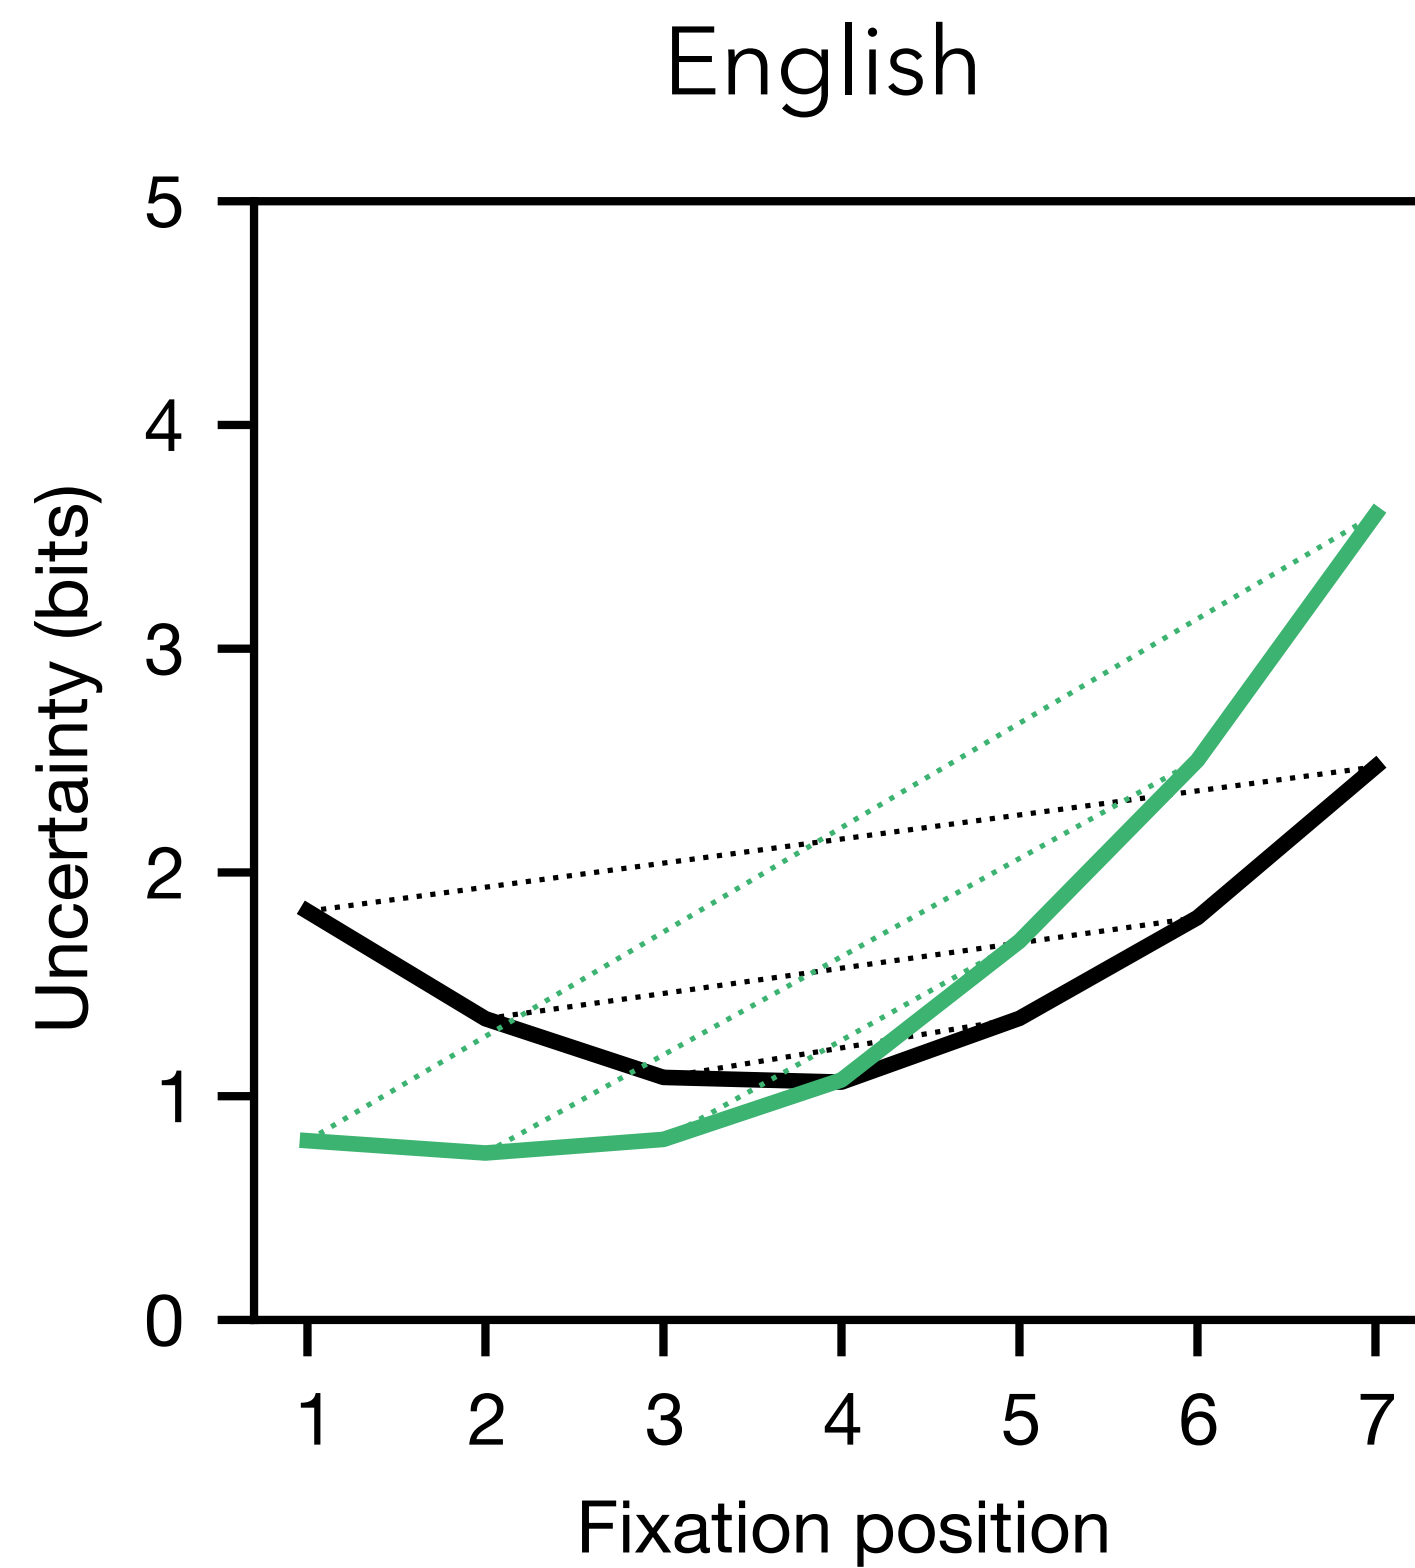

informational bias alone (symmetric visual span;  $\gamma = 0$ )

informational bias alone ( $\gamma = 0$ )

informational bias + perceptual bias ( $\gamma = 0.5$ )
